Professional Summary

Senior Data Engineer with 15+ years of experience building trusted data foundations, reusable data models, and governed metrics systems for operational and financial decision-making at scale. Strong in SQL, Python, PySpark, Databricks, Apache Airflow, and distributed data processing, with a track record of defining shared metrics architecture, codifying business logic, shaping data quality standards, and delivering curated analytics-ready assets used by Product, Operations, and Finance teams.

Technical Skills & Core Competencies

Data Engineering: SQL, Python, PySpark, Distributed Data Processing, Data Modeling, Data Warehousing, Metrics Architecture, Metrics Repositories, ETL/ELT

Platforms & BI: Databricks, Apache Airflow, Azure DevOps, Tableau, Power BI, Snowflake

Data Foundations: Semantic Layer Design, KPI Governance, Data Quality, Trusted Reporting, Financial Reconciliation, SOX-Aligned Controls, Cross-Functional Technical Leadership

Workflow Acceleration: LLM-assisted coding, documentation, and analysis

Experience

Senior Data Engineer

December 2024 – Present

Microsoft

Remote

- Built trusted data foundations on Databricks by refactoring high-scale PySpark SQL pipelines, eliminating 98% of duplicate records and enabling \$4M in monthly cost savings.
- Designed and implemented a centralized Metrics Catalog for 1B+ annual records, codifying reusable business logic, setting shared metric standards, and reducing ad-hoc reporting requests by 40%.
- Established governed semantic-layer patterns and KPI drill-through workflows that replaced manual report pulls with scalable, decision-grade reporting across international regions and business teams.
- Drove reusable metrics definitions and data quality standards across customer support, product, and engineering data, aligning cross-functional stakeholders on curated analytics-ready assets for operations reporting and executive decision support.

Senior BI Analyst, Supply Chain Analytics

December 2022 – December 2024

Microsoft

Sterling, VA

- Built and owned analytics infrastructure for global supply chain risk and resiliency, creating standardized data assets and reusable signals for 10+ teams managing \$1B+ in annual spend.
- Designed CI/CD workflows in Azure DevOps for analytics engineering delivery, improving reliability and raising quality standards across reporting systems.
- Created supplier scorecards and executive dashboards that turned complex SLA and operations data into trusted quarterly business review tooling used by senior stakeholders.

Data Reporting & Analytics Consultant

June 2020 – November 2022

Kaiser Permanente

Remote

- Consolidated 30+ fragmented reports into a governed enterprise data product by standardizing business logic, metric definitions, and reconciliation controls across 15+ stakeholder groups.
- Established data integrity controls and SOX-aligned reporting processes for a \$1B+ national deployment spanning 7 regions.
- Built Python-based analytics workflows that reduced reporting latency by 50% and improved trust in financial reporting outputs used across a multi-region deployment.

Co-Founder & CEO

February 2019 – December 2021

JUJI Opportunities

San Diego, CA

- Led product development with a 5-engineer team to build an MVP using React, Node.js, and AWS, taking the product from discovery through investor demos.

Data Analyst

June 2007 – February 2014

Core Orthopedics & Sports Medicine

Encinitas, CA

- Led HIPAA-compliant EHR implementation and built Python automation for clinical data and reporting workflows in a regulated medical environment.

Education

B.S. in International Business Management (China and Asia Pacific focus)

San Diego State University

San Diego, CA
